Botulinum toxin (*Clostridium botulinum*)

Revision 11/12/01

Missouri Dept of Health and Senior Services (800) 392-0272 (24 hour)
State Public Health Laboratory (573) 751-3334 or 751-0633

Botulinum toxin has been developed as an aerosol weapon. There is no human data on the effects of breathing this toxin, but it may resemble the food borne syndrome. In case of a bioterrorism event, people may be exposed by breathing in the toxin or by ingesting contaminated food or water.

If cases of intentional botulinum toxin exposure are suspected **through clinical diagnosis**, CDC should be contacted through the Missouri Department of Health and Senior Services (800) 392-0272. Arrangements will be made at that time for the shipment of samples to CDC for testing.

**The State Public Health Laboratory is not equipped
to process specimens for botulinum toxin.**

CDC maintains the national supply of botulism anti-toxin and will ship the anti-toxin when needed. CDC is also available for consultation with physicians 24 hours a day. Botulism can be fatal and should be considered a medical emergency.
